Career Summary

I am an international student with two years of experience working with technology from fields ranging from solar to plant-wide automation system industries. Due to my strong commitment to data-driven decision making, I have studied in fields steeped in converting raw information into actionable decisions. Through both college and certifications, I have gained proficiency in economics, statistics, analytics and coding. With my unique background, and passion for learning, I hope to find a platform in the Financial Technology field where I can make use of my education in full stack web development, data munge, and advanced electronics field.
